SAFE Organic Lawn Care Is Here To Stay!

It is time to give back to your environment by using safe, eco-friendly, lawn products and practices.

Natural Elements advocates using All-Natural lawn fertilizer in tandem with All-Natural **Corn Gluten Meal** as a pre-emergent weed-n-feed for your lawn!

Research Results: After Year One: your weeds should be reduced by 30-50%,
After Year Two: reduced by 50-75%,
After Year Three: 80-90% control of...

Crabgrass
Creeping Charlie
Dandelions
Lamb's Quarter
Clover
Chickweeds
and many more annual weeds!

Together with good soil practices including core aeration, mulching, and the watering-in of fertilizer applications...you can have a SAFE, EFFECTIVE, lawn weed control program. Pets and kids can enjoy the lawn...immediately! You will not hurt local waterways! WE ALL WIN!

\$59* per application - less than 2500 sq. ft. – only \$177/year!
\$85* per application - less than 5000 sq. ft. – only \$255/year!
\$149* per application - less than 10,000 sq. ft. – only \$447/year!
\$195* per application - less than 15,000 sq. ft. – only \$585/year!

Three applications recommended for established “healthy” lawns, (25# covers approx 1500 sq. ft.). **More applications/cost likely for “troubled” lawns. ALL FINAL PRICING DEPENDS ON SITE ANALYSIS!*

More about Corn Gluten Meal:

“Corn gluten meal is a new organic weed control that can make you have a beautiful lawn. There are a couple things to remember about corn gluten meal. The first one is that it is an organic byproduct of the corn milling process, it is a piece of the corn granule, so when you put this down it's going to smell a lot like cereal does, because it's really just a piece of the corn kernel. It needs water to activate it, and it gets better with time.

When you put it on in the springtime, put it down early. It's a pre-emergent, so it makes a film across the soil, and it's a barrier for little seeds as they grow. It does seem to get better with time, so by two or three years you'll have 80% pre-emergence weed control. It's especially good for crabgrass, and as I

*said, it's activated when it gets wet, so it works once it rains or it gets watered in.” (Marry Meyer,
Extension Horticulturist/Associate Professor, Minnesota Landscape Arboretum, Chanhassen, MN)*
